

What had started out as an act of curation had evolved into a form of exploitation.

IS

ANYBODY

THERE?

algorithm (Comp) A set of rules which specify a sequence of actions to be taken to solve a problem. Each rule is precise and unambiguously defined so that in principle it can be carried out by machine. See formal language theory.

Research remembers when memories were flesh,

the sour apple taste

of long summer evenings spent

with

spare hospital rooms, blinking machines

television playing re-runs of classic

British comedies and elephant documentaries

narrated by

the babbling of the childhood brook you

skated on in frozen winters

the tap, tap, tapping of the keys the

mechanical voice repeating

the you that isn't you

Hello

Hello

Hello

Can you hear me?
